31/03/2026	5.50 EUR*	2.85 EUR	48.2%
28/02/2026	6.98 EUR	4.42 EUR	36.6%
31/12/2025	7.05 EUR	4.19 EUR	40.5%

*The NAV has been slightly corrected compared to the press release of 9/04 (then 5.51 EUR).

MANAGER'S REPORT

Capital distribution

The € 18.73 million capital reduction (€ 1 per share), approved during the extraordinary general meeting of December 29, 2025, was paid out on March 23, 2026, bringing the subscribed capital from € 148.3 million to € 129.6 million, without cancellation of shares.

Results

During the first quarter of 2026, stock markets worldwide experienced volatile and negative trends. Software companies, in particular, struggled due to the potential impact of artificial intelligence on their business. Despite the solid growth figures of the listed software companies in Quest for Growth, their share prices also declined, reflecting general market sentiment rather than underlying business results. Since many of the investments in venture and in growth capital and venture and growth capital funds are valued based on a "peer group" (valuation multiples of comparable listed companies), those segments were also hit hard as of March 31, 2026.

Consequently, Quest for Growth closed the first three months of the financial year with a net loss of € 10.26 million, almost exclusively attributable to unrealized impairments, specifically €5.97 million on investments in listed shares, € 1.74 million on investments in venture and growth capital, and € 2.23 million on investments in venture and growth capital funds. The return on net asset value was -8.4%. Over the first three months of the year, the Quest for Growth share saw its market price fall by 10.1% (based on the holding period return method with daily intervals and an adjustment for the distribution at the ex-date on March 19) to a closing price of € 2.85 on March 31, 2026. The discount of the share price relative to net asset value increased to 48.2% at the end of the quarter, compared to 40.5% at the end of 2025.

Market environment

European stock markets experienced a volatile first quarter in 2026 due to the war in the Middle East. After the stock market rose during the first two months of the year, we have seen a clear global correction since the start of the war. The STOXX Europe 600 Net Return index fell by around 1% and the STOXX Europe 200 Small Net Return index fell by almost 3% during the first three months of this year.

Only about five sectors recorded positive returns, led by the energy sector, which fully benefited from rising oil and gas prices and was the strongest performer, rising by around 37%. The materials sector and the more defensive utilities and telecoms sectors also recorded positive returns of over 10%. The technology sector recorded a negative total return of just over 5%, but what is striking in this sector is that the returns of individual companies varied widely depending on the expected impact of artificial intelligence on their operations. Manufacturers of machinery essential for chip production, such as Besi, ASMi and ASML, rose sharply, whilst at the other end of the spectrum, software companies and IT service providers saw their share prices come under significant pressure due to fears of the consequences of AI disruption (see also below about the "SaaSocalypse").

The returns on the main US stock market indices, expressed in euros and including dividends, lagged only slightly behind those of the European stock markets, with the S&P 500 falling by just under 3% and the Nasdaq by just over 4%. The US dollar rose slightly against the euro.

Investments in quoted equities

The portfolio of listed shares realized an estimated return of -9%. Despite the difficult market conditions, three companies were still able to make a positive contribution to the result, with a total return of nearly 8% for Jensen, just under 2% for Norbit, and 1% for TKH. Jensen and Norbit thereby cashed in on their excellent operating results over the past financial year 2025.

Jensen, a manufacturer of machines for industrial laundries, saw its revenue increase by 19% compared to 2024, partly thanks to an interesting acquisition in Germany. The operating profit margin continued to rise, leading to earnings per share growth of approximately 45% in 2025. The Norwegian company Norbit, a manufacturer of sonar technology for shipping and toll systems for freight transport, managed to increase revenue by 42% in 2025. They also achieved a boost in profitability with an operating profit margin of over 22%, causing earnings per share to rise by more than 60% compared to 2024.

The biggest loser in the portfolio is the German software company Mensch und Maschine (-23%), whose share price declined in line with its peers in the software and IT services sector, as mentioned earlier. The company, which develops software for industrial companies, nevertheless saw its earnings per share increase by 6% and forecasts an acceleration in growth in 2026. Equasens, a software specialist for pharmacists, was also unable to escape the general pressure on software companies' share prices despite organic revenue growth of more than 7% compared to 2024, while earnings per share increased by nearly 9% compared to 2024. Moreover, the management's outlook still points to further growth in revenue and profit. Over the past quarter, Equasens' share price fell by a good 10%.

In the first three months of 2026, Quest for Growth divested from the Irish company Kerry. This Irish food company achieved insufficient growth in recent years, in line with limited volume growth in the food sector. Once again, the outlook failed to convince that a turnaround is imminent.

Quest for Growth's portfolio had two newcomers: Krones and SP Group. The German company Krones operates globally as a manufacturer of industrial machinery used in the production of beverages and liquid food products, offering complete solutions for the entire production process, from initial raw materials to the packaged end product. Krones is currently investing in expanding its production capacity in India and China, as a significant portion of the growing demand for drinking water comes from Asia. Despite strong results, in our view, the stock is undervalued. SP Group specializes in the production of plastic products and supplies parts, moulds, and coatings for a wide range of end markets. The main end market for this Danish small cap is the healthcare sector, for which it produces, among other things, pharmaceutical packaging and components for medical equipment. In recent years, SP Group has achieved strong growth, yet its valuation remains low.

Investments in venture and growth capital

Quest for Growth made a follow-on investment of € 75K in fruitcore robotics, a German company developing industrial robots in manufacturing and logistics. The investment was part of a € 3 million funding round among existing investors.

Another follow-on investment of € 44K was done in DMC, a US-based developer of bio-based products for multiple product markets. The investment was made to allow the company to finalise a funding round of \$ 8 million in April 2026, bringing on board new investors.

The valuation of investments in venture and growth capital and in venture and growth funds depends on a number of market related factors. For companies with a sustainable turnover or EBITDA, the valuation is done using the median of multiples of comparable quoted companies (the peer group), based on the most recent available information over 12 months. In the first quarter of 2026, some of our portfolio companies in the digital segment suffered from the "SaaSocalypse". Investors are worried that agentic AI (autonomous systems capable of executing workflows on their own) could make traditional software-as-a-service (SaaS) applications obsolete. Public markets have reacted as if that future is already underway, and as a result, valuation multiples of several software companies have dropped significantly in Q1 2026, which heavily impacted the peer group multiples applied to Quest for Growth's portfolio companies and thereby their valuations.

Investments in venture and growth funds

Capital calls were made by four funds in the first quarter of 2026.

The Capricorn Healthtech Fund II called € 0.3 million from Quest for Growth, as part of the third closing of the fund, which disposes of € 87 million committed capital. The fund made two new investments since the beginning of the year: Xyall, an Eindhoven-based innovator in molecular pathology, secured an investment of € 7.6 million from a consortium led by Capricorn's Healthtech Fund II, while Oska Health, a German hybrid care provider combining personal health coaches with AI, has raised € 11 million in funding to scale its continuous care model for high-risk, chronically ill patients. The round was led by the Capricorn Healthtech Fund II and SwissHealth Ventures.

Capricorn SCF called € 0.8 million from Quest for Growth to fund follow-on investments in DMC, Zeopore and Econic. Econic Technologies, a UK-based company focused on renewable carbon, announced in March that its partner Changhua Chemical (based in China) has opened the world's first commercial-scale production site for polycarbonate ether (PCE) polyols, a new class of sustainable polyols made with carbon dioxide. These polyols are designed for use in polyurethane foams, coatings, elastomers, and other applications in which they offer both

environmental benefits and improved performance. The opening of this plant is a significant milestone for Econic, as it demonstrates the industrial readiness of captured carbon utilization.

Capricorn Fusion China Fund has raised € 0.2 million for a follow-on investment in Spectricity.

Finally, € 1.6 million was called from Quest for Growth by the Capricorn Digital Growth Fund to fund two new investments. Conxai, based in Germany, is developing agentic AI to automate complex construction workflows, thereby addressing the challenges of project complexity, rising costs, and a lack of standardized processes. It has secured € 5 million from this financing round that was led by BayBG Venture Capital and the Capricorn Digital Growth Fund. The other new investment will be announced in April.

Following the successful closing of the acquisition of portfolio company Icometrix by GE Healthcare in late 2025, Quest for Growth received a capital distribution and dividend totaling € 2.05 million from Capricorn ICT Arkiv in February 2026.

Quest for Growth is evaluating various new investment opportunities in specialized funds, and we hope to announce a new fund investment during the second quarter.

Changes in the Board of Directors

At the General Assembly of March 26, 2026, Mr. Thierry François was appointed as new independent director, while Mr. de Vicq de Cumptich and Mr. Clijsters did not apply for reappointment after their terms ended. As a result, the board of directors has further decreased from seven to six members. We thank Mr. de Vicq de Cumptich and Mr. Clijsters for their long continuous support and dedication to Quest for Growth.

Profile

Quest for Growth is a privak/pricaf, a public alternative investment fund (AIF) with fixed capital under Belgian law, managed by Capricorn Partners NV. The diversified portfolio of Quest for Growth is mostly invested in growth companies listed on European stock exchanges, in venture & growth capital and in venture & growth funds. Quest for Growth focuses on innovative companies in areas such as digital, health and clean technologies. We have been listed on Euronext Brussels since 23 September 1998.

Investment rules

At least 25% of assets must be invested in venture and growth capital,

At least 70% of the assets must be invested in:

- venture and growth capital;
- listed growth companies with a market capitalization of less than € 1,5 billion;
- other alternative investment funds with a similar investment policy as the privak,

A maximum of 20% of the portfolio may be invested in one company,

A maximum of 30% of the portfolio may be held in cash or cash equivalents,
